

TERMOSTATI ELEKTROMEHANIČKI SA BIMETALNOM PLOČICOM

kontaktni, sa prirubnicom

ELECTROMECHANICAL THERMOSTATS WITH BIMETALLIC DISC

in contact, with faston couplings and gland flange

TB

> POSEBNA OBILJEŽJA

Bimetalni termostati TB namijenjeni su kao osigurači za:

- sigurnost od pregrijavanja
- kako bi dozvolili električne operacije u slučaju postizanja minimalne temperature

Proizvedeno koristeći Klixon® tehnologiju. Moraju se pričvrstiti za opremu tako da metalna površina termostata bude prislonjena na površinu mjernog objekta.

> DISTINCTIVE FEATURES

The bimetallic thermostats in contact TB are designed to be used as a limiter thermostat for:

- security against overheating.
- minimum temperature, to allow electric operations only if achieved a minimum temperature

Manufactured using Klixon® technology. They must be attached to the equipment so that the metal surface of the thermostat is in contact with the surface of which you want to monitor the temperature.

For this purpose, they are equipped with a gland flange with two holes. For pipe fixing, a traction spring can be helpful and is available as optional.

> MODELI I CIJENE

TB ORO

TERMOSTAT MAKSIMALNE TEMPERATURE SA ZLATNIM KONTAKTIMA

Normalno imaju zavorene kontakte (NC) i karakterizira ih niski kontaktni otpor (<10 mhoms). Učvrtni spojevi su u vertikalnoj poziciji. Koriste se kako bi zaustavili nisko naponski krug. Posebnu upotrebu imaju kod plinskih uređaja. Ponašaju se kao dodatna zaštita, ometaju protok plina u slučaju zapaljenja i pregrijavanja.

MAXIMUM TEMPERATURE THERMOSTATS WITH GOLD CONTACTS

These have a normally closed contact (NC) and are characterized by a low contact resistance (<10 mhoms). Faston connections are in vertical position. They are used to stop a low voltage circuit. A specific use is the power outage in thermocouples for gas-fired appliances (see pag. 126/131). They act as extra security by causing the interruption of gas flow not only in case of flame failure but also in case of overheating.

TB HG NO FO

TERMOSTAT MINIMALNE TEMPERATURE SA SREBRENIM KONTAKTIMA

Normalno imaju otvorene kontakte (NO) i provjereni su u otežanim uvjetima rada (100 000 ciklusa do 5A/250 Vac). Učvrtni spojevi su u horizontalnoj poziciji. Koriste se kako bi zaustavili nisko naponski krug. Koriste se kao impuls električnoj opremi u slučaju dostizanja trenutne temperature.

MINIMUM TEMPERATURE THERMOSTATS WITH SILVER CONTACTS

They have a normally open contact (NO) and are tested for durability even under conditions of stress (100,000 cycles up to 5A/250 Vac).

Faston connections are in horizontal position. They are particularly used to give consent to electrical equipment only when it reaches a preset temperature.

TB HG NC

TERMOSTAT MAKSIMALNE TEMPERATURE SA SREBRENIM KONTAKTIMA

Normalno imaju zatvorene kontakte (NC) i provjereni su u otežanim uvjetima rada (100 000 ciklusa do 5A/250 Vac). Učvrtni spojevi su u horizontalnoj poziciji. Koriste se kako bi zaustavili strujni krug u slučaju dostizanja trenutne temperature (posebnu primjenu imaju kod malih kućanskih aparata).

MAXIMUM TEMPERATURE THERMOSTATS WITH SILVER CONTACTS

They have a normally closed contact (NC) and are tested for durability even under conditions of stress (100,000 cycles up to 5A/250 Vac).

Faston connections are in horizontal position. They are used to stop at a preset temperature the power supply circuit of any electrical equipment (particularly suited for small appliances and heating technical equipment).

TB HG NO FV

TERMOSTAT MINIMALNE TEMPERATURE SA SREBRENIM KONTAKTIMA

Normalno imaju otvorene kontakte (NO) i provjereni su u otežanim uvjetima rada (100 000 ciklusa do 5A/250 Vac). Učvrtni spojevi su u vertikalnoj poziciji.

Ova dva modela imaju posebnu primjenu kod ventilokonvektora ili toplinskih pumpi kako bi dali impuls ventilatoru u slučaju dostizanja trenutne temperature.

MINIMUM TEMPERATURE THERMOSTATS WITH SILVER CONTACTS

They have a normally open contact (NO) and are tested for durability even under conditions of stress (100,000 cycles up to 5A/250 Vac).

Faston connections are in vertical position. These two items are especially used on fan coils or heat pumps to give consent to the fan operation only in case the heat exchanger has reached the preset temperature.
